The Problem

- Online fashion shopping still depends on guesswork: size, fit, style and confidence are often unclear before purchase.
- Customers waste time switching between stores, screenshots and social media inspiration.
- Brands lose sales because shoppers cannot see how the product will look on their own body.

The Solution

LookSave creates a personal digital avatar and lets users explore, try and buy fashion looks in one place.

- AI-powered face and body scan creates a precise shopping profile.
- Users swipe to change shoes, clothing, headwear and accessories instantly.
- Marketplace connects shoppers to top brands, premium collections and limited drops.

● LOOK SAVE

Personal Avatar & Fit Data

- Face scan, body type, shoe size and measurements become the user's fashion identity.
- The avatar improves product discovery and makes every recommendation more personal.
- Data stays private and is used to make shopping faster, more accurate and more confident.

LOOK SAVE

Virtual Try-On Flow

- Try sneakers, caps and full outfits without visiting a store.
- Swipe between product options and colors in a visual, mobile-first experience.
- Turn browsing into an interactive fashion game that keeps users inside the app.

● LOOK SAVE

AI Designer

A personal AI stylist that creates full looks based on occasion, mood, budget and user preferences.

- User shares the occasion: date night, business meeting, travel, party or daily wear.
- AI builds complete looks: jacket, pants, shoes, watch and accessories.
- The user chooses the favorite outfit and can buy the look directly from the marketplace.

- LOOK SAVE

Marketplace

- Men, Women and Limited collections are organized in a premium fashion interface.
- Users discover top brands, exclusive outfits and trending products in one place.
- The marketplace is designed for conversion: explore, try, save and buy.

● LOOK SAVE

Premium Brands & Limited Drops

- Top brand discovery: Nike, Adidas, Zara, Gucci, Balenciaga and future partner brands.
- Limited products create scarcity, urgency and higher order value.
- The same interface supports everyday fashion and exclusive collector drops.

● LOOK SAVE

Smart Mirror & AR Experience

- LookSave can extend from mobile into smart mirrors, AR glasses and in-store fitting experiences.
- Users can stand in front of a mirror, switch outfits with gestures and save or share the look.
- This creates a bridge between online shopping, physical retail and immersive fashion.

Business Model

Commission

Primary revenue

SaaS tools

Brand revenue

Limited drops

Premium layer

Token/NFT

Future layer

- Marketplace commission on fashion purchases made through LookSave.
- Paid brand tools: virtual try-on, product placement, analytics and campaign modules.
- Premium drops, limited collections, digital ownership and future token ecosystem.

● LOOK SAVE

Future Ecosystem: Token, NFT, Digital Shares

- LookSave Token is planned as a future utility layer for rewards, loyalty and ecosystem activity.
- NFT ownership can support limited digital fashion certificates and exclusive product access.
- Digital shares and future expansion remain roadmap concepts, not current financial promises.

Global Fashion Economy

- LookSave is built as a global marketplace layer for fashion discovery, virtual fitting and loyalty.
- One user profile can connect across brands, categories, countries and future digital assets.
- The long-term vision: one token, one avatar, one global fashion ecosystem.

Pre-seed Raise: \$500,000

- Build and launch the MVP: avatar creation, product try-on, AI Designer and marketplace flow.
- Secure first brand and boutique partnerships for test catalogues and limited drops.
- Run user acquisition campaigns in Dubai and selected fashion-forward markets.
- Prepare investor-ready metrics: activation, try-on rate, repeat purchase rate, on average
